                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a composition (I) comprising: carriers and immunostimulants; and a polypeptide (II) of a ovarian tumour polypeptide encoded by a polynucleotide (III) having a cDNA sequence (S1) from the 10912 nucleotide sequences as given in ABL77023 to ABL87934, (III) encoding (II) having a sequence (S2), a T cell population of (II), or antigen presenting cells that express (II). (I) has cytostatic carriers are carrier in a patient's biological sample preferably serum or ovarian tissue. The method comprises contacting a biological sample from a patient with (IV), detecting the amount of polynucleotide tybridising to (IV) and comparing the amount of polynucleotide amount of polynucleotide hybridising to (IV) is detected preferably by colymerase chain reaction (PCR). (I) comprising (III) and/or (II) is useful for stimulating and/or expanding T cells specific for an ovarian cuseful in design and preparation of ribozyme molecules for inhibiting capression of the tumour polypeptides and proteins in tumour cells; and consolate a full length gene from a suitable library e.g., a tumour cDNA is comparaty using well known techniques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide encoding at least 8 amino acids of any of the 6888 amino acid sequences (fully defined in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences (fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially and daressable set of single exon nucleic acid probes for measuring human gene expression, a plurality of single exon nucleic acid grobes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of probes cited above, an ORF-encoded peptide comprising the single exon probe cited above, an ORF-encoded peptide comprising at least 8 contiguous amino acids of any of the above- mentioned amino acid substitutions), an acc isolated antibody that binds specifically to a peptide cited above, an customer desiring to measure gene expression, a method of providing the man gene expression and acid substitutions, an a customer desiring to measure gene expression, a method of providing thuman gene expression and the acomputer-readable exon probe cited above. The probes methods and apparatus are useful in gene expression analysis. The probes and apparatus are useful in gene expression analysis. The probes and apparatus are useful in gene expression analysis. The probes and apparatus are useful in their specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are useful indentifying and characterising gross alternative splicing events, in detecting and characterising gross alternative splicing events, in detecting and characterising specific acids, in a seessing single exon probe of the in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a

/note="Organ: pancreas; Vector: pOTB7; Site_1: XhoI;
/site_2: EcoRI; cDNA made by oligo-dT priming.
Directionally cloned into EcoRI/XhoI sites using the
following 5' adaptor: GGCACGAG(G). Library constructed by
Ling Hong in the laboratory of Gerald M. Rubin (University
of California, Berkeley) using ZAP-cDNA synthesis kit
(Stratagene) and Superscript II RT (Life Technologies).
Note: this is a NIH_MGC Library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /organism="Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Email: segref@genoscope.cns.fr, Web: www.genoscope.cns.fr lst strand cDNA was primed with a NotI-oligo(dT) primer. Five end enriched, double-strand cDNA was digested with Not I and cinto the Not I and EcoR V sites of the pCMVSPORT 6 vector. Lib was normalized. Library was constructed by Life Technologies, division of Invitrogen. This sequence belongs to sequence clus 9131.r
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Contac

strand cDNA was primed with a NotI-oligo(dT) primer. Five primer
enriched, double-strand cDNA was digested with Not I and cloner
o the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
normalized. Library was constructed by Life Technologies, a
ision of Invitrogen. This sequence belongs to sequence cluster

Sequence 1, Application US/09130114;
Patent No. 5976807;
GENERAL INFORMATION:
APPLICANT: Horlick, Robert A.
APPLICANT: Damaj, Bassam B.
APPLICANT: Robbins, Alan K.
TITLE OF INVENTION: Eukaryotic Cells Stably Expressing Ger;
TITLE OF INVENTION: From Multiple Transfected Episomes;
FILE REFERENCE: 0867/1D903US1;
CURRENT APPLICATION NUMBER: US/09/130,114;
CURRENT FILING DATE: 1998-08-06
                                                                    RESULT 12

                                                                                                                                                                                                                                                                                                                     RESULT 3
US-09-867-701-6064
; Sequence 6064, Application US/09867701
; Patent No. US20020132237A1
; GENERAL INFORMATION:
; APPLICANT: Aglate, Paul A.
; APPLICANT: Jones, Robert
; APPLICANT: Harlocker, Susan L.
; TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THE
; TITLE OF INVENTION: AND DIAGNOSIS OF OVARIAN CANCER
; FILE REFERENCE: 210121.497
; CURRENT APPLICATION NUMBER: US/09/867,701
; CURRENT FILING DATE: 2001-05-29
; NUMBER OF SEQ ID NOS: 10912
; SOFTWARE: FastSEQ for Windows Version 4.0
; SEQ ID NO 6064
; LENGTH: 506
; TYPE: DNA
; ORGANISM: Homo sapien
